OBJECTIVE

Utilize my business application design and software development skills at a results oriented company. I have application development experience using Delphi to maintain and build business applications.

SUMMARY OF QUALIFICATIONS

Delphi application developer experience, designing intuitive interfaces, building usable structured Object Oriented software. Responsible for design, testing, debugging, and implementation of business applications. Detail oriented and quality conscious, with a proven ability to relate to and respond to the needs of management and customers. Able to grasp new concepts and follow directions while working independently or with a team.

- Windows software development using Delphi 2006 and Delphi 5.
- Able to listen, learn, and understand business related problems in order to solve them.
- Have experience in all phases of the project life-cycle.
- Experienced in analysis and creating Functional and Technical Documents.
- Database design experience Microsoft Enterprise Server.
- Ability to produce valid task estimates and deliver quality work on schedule.
- Able to work with customers in highly-charged environments with courtesy and professionalism.
- VB6, COBOL, and RPG software development. Microsoft Word, Excel, and Access experience.
- Experience working with relational database management system (RDBMS) and SQL.
- Understanding of software architecture concepts including MVC, SOA, SOAP, REST, and cloud/hybrid models.

TECHNICAL EXPERIENCE

Experienced in developing and supporting a multi-module business system created in Delphi. Maintenance of existing software and creation of new software to solve business problems. Able to create forms and reports. Experience using Database Desktop, MS-Access, VB6, and Microsoft SQL Server 2000.

► Maintained and enhanced these Windows business systems, all written in Delphi:

System Administration	General Ledger	Accounts Payable
Accounts Receivable	Payroll	Order Entry
Contact Management	Fixed Assets	Sales Prospects
Motor Management	Dispatch	Job Log

- Experience in trouble-shooting and modifications of existing Delphi applications. Designed and developed a Fixed Assets module, 100% Delphi. Development for J&M Reproductions Corporation.
- Supported and maintained the Cooperative Advertising system. Written in VB6 using AS/400 stored procedures (database resided on AS/400). Maintained TSQL and processed the Year-end procedures using Microsoft Enterprise SQL Server with DTS packages. This was done at Carhartt headquarters in Dearborn, Michigan.
- Designed and developed new Driver Dispatching system to track pick-ups and deliveries, 100% developed in Delphi and successfully implemented. This application records shipment information and features the creation of driver documentation, real-time inquiry and reporting, and historical inquiry and reporting. J&M Reproductions Corp.
- Created an application for an electric motor repair company, developed 100% in Delphi. The application tracked all aspects of receiving, repair, and release of electric motors. This was developed for Collier Electric Motor Company.
- Development on an Automotive Leasing application in Delphi using MS-Access as the database.
- Provided feedback relating to which Delphi projects should move forward and those which should be delayed.

ROLLS AND RESPONSIBILITIES

- Evaluating the client's requirement in-depth and detailed progress to management
- Analyzing the information to be processed during projects
- Developing algorithms, flowcharts and project plans
- Building Windows based systems using Delphi
- Involved in application testing and removing bugs
- Developing test cases according to the functional specifications of the project
- Doing the development according to the instructions received
- Developing the enhancements for the existing systems
- Involvement in the installation and implementation applications
- Doing the yearly and/or special maintenance of the application at user's end

SOLUTIONS IN SOFTWARE, INC. Harsens Island, Michigan

Aug. 1989 – Present

Software Developer

Software developer providing analysis and software development services to companies looking to improve their business practices by using technology to gain an advantage over the competition. I have experience in defining the problem, then developing a solution including successfully completing the project.

Experience creating software in the following industries: Manufacturing, Distribution, Consumer Services, Insurance (Medical, Liability, Workers Compensation, Property), and Accounting.

I also have experience building and maintaining applications created in DELPHI on the network platform and in COBOL VB, and RPG on the IBM AS/400 (iSeries).

ELECTRONIC DATA SYSTEMS. Plano, Texas

Jun. 1988 – Aug. 1989

Database Administrator

DBA for Saturn dealership software, including database design and creation. Also analysis, design, and software development. This was done on an AS/400 platform.

EDUCATION

Associates Degree, Computer Data Processing; Associates Degree, Humanities; Associates Degree, General Business, Macomb County Community College. System 36/38 and AS/400 – iSeries courses at: IBM Training Center, Southfield, Michigan. IBM AS/400 Technical Conference, San Francisco. PC courses at: Computer Horizons Training Centers in Livonia, Michigan and Troy, Michigan. ACT! Training by Networkspace.
